SUMMARY

Full-Stack Developer with 1.8 years of experience in building scalable, ERP-integrated platforms and automation pipelines. Strong foundation in Java full-stack development, combined with expertise in designing component-driven UI with Plasmic, managing complex ERP customizations via client/server scripts, and developing robust validation and analytics dashboards.

WORK EXPERIENCE

Front-End Developer | Elbrit Life Sciences Pvt. Ltd., Chennai, TN

Jan 2025 – Present

- Leading the end-to-end development of Elbrit One, a unified enterprise platform integrating sales, HR, and inventory operations.
- Designing and implementing UI/UX components using Plasmic to ensure visual consistency and accelerate feature rollouts.
- Specializing in ERPNext customization, including writing complex client-side and server-side scripts to automate business workflows and data integrity.
- Implementing a role-based data visibility system across a six-level organizational hierarchy, controlling record access by role profile, territory, and department for 480+ users.
- Developing and maintaining validation dashboards, conference landing pages, and interactive tools for internal business operations.
- Architecting and optimizing GraphQL and REST APIs for real-time ERPNext integration, enabling seamless synchronization of invoices, stock ledgers, and performance analytics.
- Engineering automated data pipelines and process workflows using n8n, significantly reducing manual intervention across business modules.
- Integrating Power BI for real-time data visualization, creating custom connectors to surface actionable KPIs directly within the platform.
- Implementing Sentry for robust error tracking and performance monitoring, ensuring high system reliability.

TECHNICAL SKILLS

Frontend: React.js, Next.js, JavaScript, Plasmic, Responsive UI/UX, HTML, CSS
Backend: Node.js, JavaScript, GraphQL, REST APIs, Java, SQL
Databases: PostgreSQL (Neon DB), Firebase / Firestore, NoSQL
Tools & Platforms: Linux, Git, Power BI, ERPNext, n8n, Sentry, Netlify
AI Tools: Prompt Engineering, LLM Integration, Cursor, GitHub Copilot, Claude

PROJECTS

Library Management System

Stack: Java, MySQL, HTML, CSS, JavaScript

- Developed a web application for managing library operations such as book checkouts, returns, and inventory.
- Used MySQL to store and manage library data, including books, members, and transactions.
- Implemented features for automatic overdue notifications and reservation management.

Smart Traffic Management System

Stack: Python, OpenCV, YOLO, Dijkstra Algorithm

- Developed a smart traffic management system to prioritize emergency vehicles.
- Implemented the Dijkstra algorithm for shortest path allocation.
- Integrated YOLO for real-time ambulance detection at traffic signals.
- Enhanced traffic management efficiency by reducing delays for emergency vehicles.

EDUCATION

B.E. Electronics and Communication Engineering

Kongu Engineering College • CGPA: 7.6/10

2020 – 2024

Higher Secondary Academic

GRD CPF Matric School • Score: 70/100

2018 – 2020
